LOAD MORE

NOTES TO RAGU

SideBar dummied in, content TBC.

I have added a "load more" button at the bottom, if you think it would be better to have a "next page" or jsut to keep it scrolling, then either option is fine. The social icons will link to the contributors personal soial media, the bookmark is so users can save contributors to their favourites. Maybe even we could send them alerts when one of their bookmarked contributors has posted a feature. If we could have flexibility to have some ows with two people, some with three that would be great. There would never be mroe than three in a row.
